

ABSTRACT

A protective textile material consisting of several material layers is proposed to provide protective clothing that simultaneously satisfies varying requirements, wherein at least one material layer is a flame-resistant and/or flame-retardant material (10, 30), and at least one other material layer is a cut-resistant protective material (11, 31) and/or a bullet or bayonet-proof material. Corresponding cut-resistant protective pants (20) with leg sleeves (22) forming two pant legs, wherein each leg sleeve (22) can be opened at least in part by at least one locking means (26, 27), are characterized in that the leg sleeves (22) are joined with an upper section (21), in particular for protecting the chest area of an individual, so that safety pinafore overalls are created, and the pinafore overalls (20) consist of a protective textile material.
